

## F 1014 – Azraq oasis area

Well F 1014 “AIN EL BAIDA (SHALLOW-4)” in Azraq oasis area is a monitoring well where the aquifer saturated thickness is forecast to decline to 90 percent by 2030. Water levels show a seasonal variation, but the long-term trend has been stable since measurements began in 1996. This well penetrates two aquifers, the Basalt and the underlying B4.
